44. (Currently Amended) A computer-readable storage device ~~medium~~ having stored thereon computer executable instructions for implementing a method for upgrading an installed firmware with a candidate firmware, said computer executable instructions when executed perform the steps of:

determining if each of said installed and candidate firmwares has a control block, wherein each of said control blocks includes a firmware family code, firmware stepping level and compatibility table of an associated firmware;

acquiring firmware family codes and firmware stepping levels of said installed and candidate firmwares in response to said determination that both of said installed and candidate firmwares have a control block, wherein each said firmware family code uniquely identifies a product family of a firmware image, and wherein the product family is defined as a set of products that utilizes a same firmware that allows unrestricted

changes from one revision level of said firmware image to another revision level of said firmware image;

comparing said family codes and said stepping levels of said installed and candidate firmwares; [[and]]

determining if said installed and candidate firmwares are compatible utilizing said compatibility tables in response to said family codes and said stepping levels of said installed and candidate firmwares not matching; and [[.]]

in response to determining that said installed firmware does not have a firmware family control block that includes a firmware family code, firmware stepping level and compatibility table for said installed firmware, causing a flash utility to refuse to install said candidate firmware.

REASONS FOR ALLOWANCE

9. The following is an examiner’s statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, in response to determining that said installed firmware does not have a

firmware family control block that includes a firmware family code, firmware stepping level and compatibility table for said installed firmware, causing a flash utility to refuse to install said candidate firmware as recited in independent claims 35 and 44.

The closest cited prior arts, the combination of Furtney (U.S. 5,579,509) and Kathail (U.S. 5,802,365) teaches a method for upgrading firmware. However, the combination of Furtney (U.S. 5,579,509) and Kathail (U.S. 5,802,365) fails to teach in response to determining that said installed firmware does not have a firmware family control block that includes a firmware family code, firmware stepping level and compatibility table for said installed firmware, causing a flash utility to refuse to install said candidate firmware as recited in independent claims 35 and 44; and as pointed out by the applicant's remarks/arguments on pg. 13, par. 2 to pg. 14, par. 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
